(a) Discrete distribution ($K = 50$, $N = 500$)
Support size
Generation g
Replace
Accumulate
(b) Temperature-filtered accumulation
$H(q)/\log K$
Samples added (log scale)
$T_s = 0.8$
$T_s = 1.0$
$T_s = 1.25$
Uniform
$H(p)$
(c) Fixed-design regression (OLS)
E_g/E_0
Generation g
Replace
Accumulate
$g + 1$
$\sum_{i \le g+1} i^{-2}$
