Supplementary Table S1. Reference Classification

Legend

Scope. All 86 sources cited in the submitted manuscript. The systematic search was conducted on 29 October 2026 (cutoff).

Column definitions.

\# Sequential number (alphabetical by citation key).

Key BibTeX citation key.

Citation First author et al. (year) followed by an abbreviated title.

Venue Journal, conference, or institution (truncated to 45 characters).

Cat. Category of use in this review (see below).

In Orig. Sub. **yes** = present in the original submission (57 sources); **no** = added during the revision. Of the 57 original sources, 18 were removed together with the material they supported; 39 are retained.

Route For revision entries only: **S** = retrieved by the structured search (verified against `screening-file-A02.csv`); **CH** = identified by citation chasing from an already-included source; **R** = added during revision to address a reviewer comment or to verify a claim against primary sources. Original-submission entries leave this column blank (—).

Anchor **yes** = formal anchor study as cited at §3.2 (8 studies; list at `sn-article.tex` L424).

† Preprint or workshop paper, as marked by `\nrv{}` in the manuscript (14 sources).

Category criterion. Category reflects how each source is *used* in this review, not the source type per se. **E** (evidence study): a source whose formal results, experiments or empirical observations are directly synthesised in the body of the review. **P** (position paper): a source whose argument or normative claim is cited, without formal results or data of the source's own. **C** (context / background): a source cited to establish background, methodology, regulatory context, or to disambiguate a concept.
